Unti-unting ayusin ang iskedyul ng patubig upang maiwasan ang sobrang tubig o kakulangan ng halumigmig sa lupa. Patuloy na subaybayan ang kondisyon ng lupa at gumamit ng mulch upang mapanatili ang sapat na tubig. Siguraduhing maayos ang daluyan ng tubig upang maiwasan ang pagbaha at masigurong malusog ang paglaki ng ugat ng mga pananim. Bantayan ang posibleng paglitaw ng mga sakit na dulot ng fungi dahil sa mataas na halumigmig at gumamit ng organikong fungicide kung kinakailangan.
