Enhance farm resilience by building drainage canals to prevent waterlogging and applying fungicides or biocontrol agents to manage fungal diseases. Prune fruit trees to reduce wind damage and store tools and machinery in covered areas to prevent deterioration. Regularly inspect crops for stress, pests, or diseases and apply necessary treatments. Repair damaged irrigation channels and dikes to prepare for future rainfall. To reduce post-harvest losses and increase income, process perishable products into value-added goods such as dried fruits, pickled vegetables, or flour
