Farmers are advised to clean and repair irrigation canals, dikes, and drainage systems to prevent flooding. Planting should be adjusted according to soil moisture and rainfall conditions, and overly wet fields should be avoided. Proper plant spacing should be maintained to reduce pest and disease incidence. Fertilizer application should be reduced or postponed during heavy rains, and compost or organic fertilizers are recommended to improve soil structure. Regular monitoring for pests and diseases, especially fungal infections, is advised. Integrated Pest Management (IPM) practices should be implemented, and spraying should only be done under favorable weather. Harvesting should be scheduled on dry days, and proper drying and storage of produce must be ensured. Farm tools, machinery, and facilities should be kept clean and well-maintained. Follow PAGASA on social media or visit the website for the latest local weather updates and advisories.

Pinapayuhan ang mga magsasaka na linisin at kumpunihin ang mga kanal ng patubig, pilapil, at drainage systems upang maiwasan ang pagbaha. Ang pagtatanim ay dapat iayon sa kondisyon ng halumigmig ng lupa at dami ng ulan, at iwasan ang pagtatanim sa labis na basang lupa. Siguraduhin ang tamang agwat ng tanim upang mabawasan ang pagdami ng peste at sakit ng halaman. Ang paglalagay ng pataba ay dapat bawasan o ipagpaliban kung may malakas na ulan, at inirerekomenda ang paggamit ng compost o organikong pataba upang mapabuti ang istruktura ng lupa. Magsagawa ng regular na pagmamaman para sa peste at sakit, lalo na sa fungal infections. Ipatupad ang Integrated Pest Management (IPM), at mag-spray lamang kung maganda ang lagay
