AREAS AFFECTED BY THE WEATHER SYSTEMS	HEAT INDEX MONITORING AND FORECASTING (OBSERVED AND 2-DAY FORECAST)
SOUTHWEST MONSOON, THUNDERSTORMS AND MODERATE TO HEAVY RAINS • Ensure canals, drainage systems, and waterways are clear and functioning properly to prevent water accumulation in fields and gardens. • Monitor crops regularly for pests and diseases that may increase under humid and wet conditions. • Provide adequate plant supports, such as stakes and trellises, to protect crops from damage caused by rain and gusty winds. • Store fertilizers, seeds, animal feeds, and farm equipment in dry and secure areas to prevent spoilage and deterioration. • Handle, store, and transport harvested produce properly to maintain quality and minimize losses due to moisture exposure. • Stay informed through weather advisories and forecasts issued by local government units (LGUs) and DOST-PAGASA to prepare for possible changes in weather conditions.	The Heat Index is a human discomfort index that gives the apparent temperature on what humans perceive or feel as the temperature (from the surroundings) affecting the body. High air temperature and high relative humidity results to high apparent temperature. https://www.pagasa.dost.gov.ph/climate/climate-heat-index
