AREAS AFFECTED BY THE WEATHER SYSTEMS	HEAT INDEX MONITORING AND FORECASTING (OBSERVED AND 2-DAY FORECAST)
SOUTHWEST MONSOON, THUNDERSTORMS AND MODERATE TO HEAVY RAINS • Ensure canals, drainage systems, and waterways are clear and functioning properly to prevent water accumulation in fields and gardens. • Monitor crops regularly for pests and diseases that may increase under humid and wet conditions. • Provide adequate plant supports, such as stakes and trellises, to protect crops from damage caused by rain and gusty winds. • Store fertilizers, seeds, animal feeds, and farm equipment in dry and secure areas to prevent spoilage and deterioration. • Handle, store, and transport harvested produce properly to maintain quality and minimize losses due to moisture exposure. • Stay informed through weather advisories and forecasts issued by local government units (LGUs) and DOST-PAGASA to prepare for possible changes in weather conditions.	The Heat Index is a human discomfort index that gives the apparent temperature on what humans perceive or feel as the temperature (from the surroundings) affecting the body. High air temperature and high relative humidity results to high apparent temperature. https://www.pagasa.dost.gov.ph/climate/climate-heat-index

SA MGA LUGAR NA APEKTADO NG WEATHER SYSTEMS

HABAGAT, PAGKIDLAT-PAGKULOG AT KATAMTAMAN HANGGANG MALAKAS NA PAG-ULAN

- Tiyaking maayos ang mga kanal at daluyan ng tubig upang maiwasan ang pag-ipon ng tubig sa mga taniman.
- Bantayan ang mga pananim laban sa mga peste at sakit na maaaring dumami dahil sa mataas na halumigmig at basang kondisyon.
- Maglagay ng suporta sa mga halaman at gulay na madaling matumba o masira dahil sa hangin at ulan.
- Takpan at itago sa tuyo at ligtas na lugar ang mga pataba, binhi, pakain sa hayop, at mga kagamitang pangsakahan upang maiwasan ang pagkasira.
- Siguraduhing maayos ang pag-iimbak at pagdadala ng mga inaning produkto upang mapanatili ang kalidad at maiwasan ang pagkapanis.

PAGSUBAYBAY AT PAGTATAYA NG HEAT INDEX (NAOBSERBAHAN AT 2-ARAW NA PAGTATAYA)

Ang init na nararamdaman ng katawan ng tao (apparent temperature) ay hindi akma ng nasusukat gamit lamang ang temperature ng hangin (air temperature). Ito ay mas tamang naitataya kung isasama ang datos ng alinsangan o halumigmig (relative humidity). Ang impormasyon na ito ay tinatawag na Heat Index at ito ay matutukoy gamit ang Heat Index Chart.

Inaasahang ang El Niño sa kalagitnaan ng 2026, na magdudulot ng tagtuyot at posibleng kakulangan sa tubig. Pinapayuhan ang mga magsasaka na panatilihin ang maayos na irigasyon, gumamit ng drought-tolerant na pananim, at anihin agad ang mga hinog na tanim kung kinakailangan. Maaari pa ring magkaroon ng localized thunderstorms, lalo na sa hapon o gabi, na may kasamang malakas na ulan, hangin, kidlat, at posibleng flash flood sa mabababang lugar. Panatiling updated sa araw-araw na lagay ng panahon, tiyakin ang kaligtasan ng mga pasilidad sa bukid, iwasan ang trabaho sa bukid tuwing may thunderstorm, at iangkop ang taniman ayon sa forecast ng DOST-PAGASA.
